# INDEX TO AUTHORS

A

**Abbott, Lynn DeForrest, Jr.,** and **Smith, J. Doyle.** Chemical preparation of homogentisic acid, 365

**Abraham, Edward P.** See *Heidelberger, Abraham, and Lepkovsky,* 151

**Aldrich, Robert A.** See *Grinstein, Aldrich, Hawkinson, and Watson,* 983

**Algeri, E. J.** See *Fisher, Algeri, and Walker,* 71

**Anfinsen, Christian B., Beloff, Anne, and Solomon, A. K.** The incorporation of radioactive carbon dioxide and acetate into liver proteins *in vitro,* 1001

**Arvidson, H., Eliasson, N. A., Hammarsten, Einar, Reichard, Peter, von Ubisch, H.,** and **Bergström, Sune.** Orotic acid as a precursor of pyrimidines in the rat, 169

**Augustinsson, Klas-Bertil,** and **Nachmansohn, David.** Studies on cholinesterase. VI. Kinetics of the inhibition of acetylcholine esterase, 543

**Awad, William Ibrahim.** See *Moubasher and Awad,* 915

**Axelrod, Julius.** See *Brodie, Axelrod, Soberman, and Levy,* 25

—. See *Soberman, Brodie, Levy, Axelrod, Hollander, and Steele,* 31

B

**Balls, A. K.** See *Jansen, Nutting, and Balls,* 201

—. See *Jansen, Nutting, Jang, and Balls,* 189

—. See *Schwimmer and Balls,* 1063

**Barker, H. A.,** and **Lipmann, Fritz.** The rôle of phosphate in the metabolism of *Propionibacterium pentosaceum,* 247

**Beard, Dorothy.** See *Lanni, Sharp, Eckert, Dillon, Beard, and Beard,* 1275

**Beard, J. W.** See *Lanni, Sharp, Eckert, Dillon, Beard, and Beard,* 1275

**Beloff, Anne.** See *Anfinsen, Beloff, and Solomon,* 1001

**Bergström, Sune.** See *Arvidson, Eliasson, Hammarsten, Reichard, von Ubisch, and Bergström,* 169

**Bird, O. D.** See *Swendseid, Wittle, Moersch, Bird, and Brown,* 1175

**Bitman, Joel,** and **Cohen, Saul L.** Destruction of 3-β-hydroxy 17-ketosteroids during hydrolysis with hydrochloric acid, 455

**Bloch, Konrad.** The synthesis of glutathione in isolated liver, 1245

—. See *Johnston and Bloch,* 493

—. See *Ponticorvo, Rittenberg, and Bloch,* 839

**Bodansky, Oscar.** The influence of magnesium and cobalt on the inhibition of phosphatases of bone, intestine, and osteogenic sarcoma by amino acids, 81

**Borek, Ernest,** and **Rittenberg, D.** The metabolism of acetone by surviving rat liver, 843

**Borsook, Henry, Deasy, Clara L., Haagen-Smit, A. J., Keighley, Geoffrey,** and **Lowy, Peter H.** The incorporation of labeled lysine into the proteins of guinea pig liver homogenate, 689

—, —, —, —, and **Lowy, Peter H.** A peptide fraction in liver, 705

**Bowen, William J.** The absorption spectra and extinction coefficients of myoglobin, 235

**Briggs, F. N., Chernick, S.,** and **Chaikoff, I. L.** The metabolism of arterial tissue. I. Respiration of rat thoracic aorta, 103

**Brodie, Bernard B., Axelrod, Julius, Soberman, Robert,** and **Levy, Betty B.** The estimation of antipyrine in biological materials, 25

—. See *Soberman, Brodie, Levy, Axelrod, Hollander, and Steele,* 31

**Brown, Raymond A.** See *Swendseid, Wittle, Moersch, Bird, and Brown*, 1175

**Buell, Mary V.** See *Still, Buell, Knox, and Green*, 831

**Burris, R. H.** See *Lardy, Potter, and Burris*, 721

C

**Camien, Merrill N., and Dunn, Max S.** The utilization of D-glutamic acid by *Lactobacillus arabinosus* 17-5, 935

**Caputto, R., Leloir, Luis F., Trucco, R. E., Cardini, C. E., and Paladini, A. C.** The enzymatic transformation of galactose into glucose derivatives, 497

**Cardini, C. E.** See *Caputto, Leloir, Trucco, Cardini, and Paladini*, 497

**Carey, Mary M., and Dziewiatkowski, Dominic D.** The adenosinetriphosphatase and phosphatase (acid and alkaline) activity of muscle homogenates from rabbits on a vitamin E-deficient diet, 119

**Carter, Herbert E., Loo, Y. H., and Rothrock, John W.** Degradation products of streptamine: $\alpha,\gamma$-diamino-$\beta$-hydroxyglutaric acid, 1027

**Chaikoff, I. L.** See *Briggs, Chernick, and Chaikoff*, 103

—. See *Chernick, Srere, and Chaikoff*, 113

—. See *Masoro, Chaikoff, and Dauben*, 1117

**Chance, Britton.** The composition of catalase-peroxide complexes, 1311

—. The primary and secondary compounds of catalase and methyl or ethyl hydrogen peroxide. I. Spectra, 1331

—. II. Kinetics and activity, 1341

—. The reaction of catalase and cyanide, 1299

**Chanutin, Alfred.** See *Ludewig and Chanutin*, 271

**Chernick, S., Srere, Paul A., and Chaikoff, I. L.** The metabolism of arterial tissue. II. Lipide syntheses: the formation *in vitro* of fatty acids and phospholipides by rat artery with $C^{14}$ and $P^{32}$ as indicators, 113

**Chernick, S.** See *Briggs, Chernick, and Chaikoff*, 103

**Claff, C. Lloyd, and Tahmisian, Theodore N.** Cartesian diver technique, 577

**Clark, Ariel M.** See *Spicer and Clark*, 987

**Clegg, Robert E., and Sealock, Robert Ridgely.** The metabolism of dihydroxyphenylalanine by guinea pig kidney extracts, 1037

**Cohen, Saul L.** See *Bitman and Cohen*, 455

**Cori, Carl F.** See *Sutherland, Posternak, and Cori*, 501

D

**Daly, Marie M., and Mirsky, A. E.** Chromatography of purines and pyrimidines on starch columns, 981

**Dauben, W. G.** See *Masoro, Chaikoff, and Dauben*, 1117

**Davis, Robert H., Mathis, Alice L., Howton, David R., Schneiderman, Herman, and Mead, James F.** Studies on the photochemistry of 2-methyl-1,4-naphthoquinone, 383

**Deasy, Clara L.** See *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 689, 705

**DeMeio, R. H.** See *Pearlman and DeMeio*, 1141

**Dewey, Virginia C.** See *Kidder and Dewey*, 181

**Dill, Wesley A., and Glazko, Anthony J.** Biochemical studies on diphenhydramine (benadryl). I. Chemical determination of diphenhydramine, 395

—. See *Glazko and Dill*, 403, 417

—. See *Glazko, McGinty, Dill, Wilson, and Ward*, 409

**Dillon, Edith S.** See *Lanni, Sharp, Eckert, Dillon, Beard, and Beard*, 1275

**Doudoroff, Michael, Hassid, W. Z., Putman, E. W., Potter, A. L., and Lederberg, Joshua.** Direct utilization of maltose by *Escherichia coli*, 921

**Dunn, Max S., McClure, Lawrence E., and Merrifield, R. Bruce.** The determination of proline in protein hydrolysates with *Lactobacillus brevis*, 11
—. See *Camien and Dunn*, 935
—. See *Rockland and Dunn*, 511
**Dziewiatkowski, Dominic D.** See *Carey and Dziewiatkowski*, 119

E

**Eckert, Edward A.** See *Lanni, Sharp, Eckert, Dillon, Beard, and Beard*, 1275
**Eisenberg, Max A.** See *Schwert and Eisenberg*, 665
**Eliasson, N. A.** See *Arvidson, Eliasson, Hammarsten, Reichard, von Ubisch, and Bergström*, 169
**Elliott, Harold.** See *Gofman, Lindgren, and Elliott*, 973

F

**Fankuchen, I.** See *Sobel, Hanok, Kirshner, and Fankuchen*, 205
**Farber, Miriam.** See *Harris, Moore, and Farber*, 369
**Feldott, Gladys.** See *Lardy and Feldott*, 509
**Ferger, Martha F., and du Vigneaud, Vincent.** The antiphenylalanine effect of β-2-thienylalanine for the rat, 61
**Fisher, R. S., Algeri, E. J., and Walker, J. T.** The determination and the urinary excretion of caffeine in animals, 71
**Frieden, Earl, and Winzler, Richard J.** Competitive antagonists of thyroxine and structurally related compounds, 423

G

**Gallagher, T. F.** See *Kritchevsky and Gallagher*, 507
—. See *Marshall and Gallagher*, 1265
**Gibbs, Martin.** Distribution of labeled carbon in plant sugars after a short period of photosynthesis in $C^{14}O_2$, 499
**Gilbert, James B.** See *Price, Gilbert, and Greenstein*, 1169
**Gillis, M. B., and Norris, L. C.** Effect of the animal protein factor on the requirement for methylating compounds, 487
**Glazko, Anthony J., and Dill, Wesley A.** Biochemical studies on diphenhydramine (benadryl). II. Distribution in tissues and urinary excretion, 403
— and —. IV. Degradation of benadryl by tissue enzymes, 417
—, **McGinty, D. A., Dill, Wesley A., Wilson, M. L., and Ward, C. S.** Biochemical studies on diphenhydramine (benadryl). III. Application of radioactive carbon to metabolic studies of benadryl, 409
—. See *Dill and Glazko*, 395
**Glick, David.** See *Wattenberg and Glick*, 1213
**Gofman, John W., Lindgren, Frank T., and Elliott, Harold.** Ultracentrifugal studies of lipoproteins of human serum, 973
**Goldblith, Samuel A., Proctor, Bernard E., Hogness, John R., and Langham, Wright H.** The effect of cathode rays produced at 3000 kilovolts on niacin tagged with $C^{14}$, 1163
**Goldstein, M.** See *Levine, Goldstein, Klein, and Huddlestun*, 985
**Granick, S.** The pheoporphyrin nature of chlorophyll *c*, 505
**Green, D. E.** See *Still, Buell, Knox, and Green*, 831
**Greene, Richard D.** The extraction of folic (pteroylglutamic) acid conjugate from yeast, 1075
**Greenstein, Jesse P.** See *Price, Gilbert, and Greenstein*, 1169
**Grinstein, Moisés, Aldrich, Robert A., Hawkinson, Violet, and Watson, Cecil James.** An isotopic study of porphyrin and hemoglobin metabolism in a case of porphyria, 983
—, **Kamen, Martin D., and Moore, Carl V.** The utilization of glycine in the biosynthesis of hemoglobin, 359
**Gullberg, Mary E.** See *Heidelberger, Gullberg, Morgan, and Lepkovsky*, 143

**Gunsalus, I. C.** See *Umbreit and Gunsalus*, 279
**Gutmann, Helmut R.** See *Wood and Gutmann*, 535
**György, Paul.** See *Tomarelli, Norris, and György*, 485

H

**Haagen-Smit, A. J.** See *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 689, 705
**Hall, C. E.** Electron microscopy of fibrogen and fibrin, 857
**Halpern, Philip E.** See *Stevens and Halpern*, 389
**Hammarsten, Einar.** See *Arvidson, Eliasson, Hammarsten, Reichard, von Ubisch, and Bergström*, 169
**Handler, Philip, Kamin, Henry, and Harris, Jerome S.** The metabolism of parenterally administered amino acids. I. Glycine, 283
**Hanok, Albert.** See *Sobel, Hanok, Kirshner, and Fankuchen*, 205
**Hansen, R. G., and Phillips, Paul H.** Studies on proteins from bovine colostrum. III. The homologous and heterologous transfer of ingested protein to the blood stream of the young animal, 523
**Hanson, H. Theo, and Smith, Emil L.** Carnosinase: an enzyme of swine kidney, 789
— and —. Papain resolution of DL-tryptophan; optical specificity of carboxypeptidase, 815
—. See *Smith and Hanson*, 803
**Harris, Jerome S.** See *Handler, Kamin, and Harris*, 283
**Harris, Philip L., and Ludwig, Marion I.** Relative vitamin E potency of natural and of synthetic α-tocopherol, 1111
**Harris, T. N., Moore, Dan H., and Farber, Miriam.** Physicochemical studies on lymph and lymphocyte extracts from normal and stimulated lymphatic tissue, 369
—. See *Moore and Harris*, 377
**Harvey, Stewart C.** The carbohydrate metabolism of *Trypanosoma hippicum*, 435
**Hassid, W. Z.** See *Doudoroff, Hassid, Putman, Potter, and Lederberg*, 921
**Hastings, A. Baird.** See *Topper and Hastings*, 1255
—. See *Villee and Hastings*, 673
**Hawkinson, Violet.** See *Grinstein, Aldrich, Hawkinson, and Watson*, 983
**Heidelberger, Charles.** The synthesis of DL-tryptophan-β-$C^{14}$, indole-3-acetic acid-α-$C^{14}$, and DL-tryptophan-3-$C^{14}$, 139
—, **Abraham, Edward P., and Lepkovsky, Samuel.** Tryptophan metabolism. II. Concerning the mechanism of the mammalian conversion of tryptophan into nicotinic acid, 151
—, **Gullberg, Mary E., Morgan, Agnes Fay, and Lepkovsky, Samuel.** Tryptophan metabolism. I. Concerning the mechanism of the mammalian conversion of tryptophan into kynurenine, kynurenic acid, and nicotinic acid, 143
**Hendlin, David.** See *Koditschek, Hendlin, and Woodruff*, 1093
**Hestrin, Shlomo.** Action pattern of crystalline muscle phosphorylase, 943
**Hill, Elsie.** See *Kochler and Hill*, 1
**Hodson, A. Z.** Oleic acid interference in the *Neurospora crassa* assay for biotin, 49
**Hofstee, B. H. J.** Inhibition of the enzymic oxidation of xanthine and xanthopterin by pteridines, 633
**Hogness, John R.** See *Goldblith, Proctor, Hogness, and Langham*, 1163
**Hollander, Vincent.** See *Soberman, Brodie, Levy, Axelrod, Hollander, and Steele*, 31
**Hottle, George A.** See *Shepard and Hottle*, 349
**Howton, David R.** See *Davis, Mathis, Howton, Schneiderman, and Mead*, 383
**Huddlestun, B.** See *Levine, Goldstein, Klein, and Huddlestun*, 985

**Huggins, Charles, and Jensen, Elwood V.** Thermal coagulation of serum proteins. I. The effects of iodoacetate, iodoacetamide, and thiol compounds on coagulation, 645

J

**Jacobs, Walter A.** See *Sato and Jacobs*, 623

**Jagannathan, Venkataraman, and Luck, J. Murray.** Phosphoglucomutase. I. Purification and properties, 561

— and —. II. Mechanism of action, 569

**Jang, Rosie.** See *Jansen, Nutting, Jang, and Balls*, 189

**Jansen, Eugene F., Nutting, M.-D. Fellows, and Balls, A. K.** Mode of inhibition of chymotrypsin by diisopropyl fluorophosphate. I. Introduction of phosphorus, 201

—, —, **Jang, Rosie, and Balls, A. K.** Inhibition of the proteinase and esterase activities of trypsin and chymotrypsin by diisopropyl fluorophosphate: crystallization of inhibited chymotrypsin, 189

**Jensen, Elwood V.** See *Huggins and Jensen*, 645

**Johnson, Marvin J.** See *Park and Johnson*, 585

**Johnston, Robert B., and Bloch, Konrad.** The synthesis of glutathione in cell-free pigeon liver extracts, 493

K

**Kalnitsky, George.** The formation of citrate by extracts of rabbit kidney cortex, 1015

**Kamen, Martin D.** See *Grinstein, Kamen, and Moore*, 359

**Kamin, Henry.** See *Handler, Kamin, and Harris*, 283

**Karp, Adele, and Stetten, DeWitt, Jr.** The effect of thyroid activity on certain anabolic processes studied with the aid of deuterium, 819

**Kaufman, Dorothy.** See *Perlmann and Kaufman*, 133

**Keighley, Geoffrey.** See *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 689, 705

**Kennedy, Eugene P., and Lehninger, Albert L.** Oxidation of fatty acids and tricarboxylic acid cycle intermediates by isolated rat liver mitochondria, 957

**Kensler, C. J.** The influence of diet on the riboflavin content and the ability of rat liver slices to destroy the carcinogen *N,N*-dimethyl-*p*-aminoazobenzene, 1079

**Kepler, Edwin J.** See *Mason, Kepler, and Schneider*, 615

**Kershaw, Bernice B.** See *Tauber, Kershaw, and Wright*, 1155

**Kidder, G. W., and Dewey, Virginia C.** The biological activity of substituted purines, 181

**Kirshner, Howard A.** See *Sobel, Hanok, Kirshner, and Fankuchen*, 205

**Klein, S.** See *Levine, Goldstein, Klein, and Huddlestun*, 985

**Knox, W. Eugene.** See *Still, Buell, Knox, and Green*, 831

**Koditschek, Leah K., Hendlin, David, and Woodruff, H. Boyd.** Investigations on the nutrition of *Lactobacillus lactis* Dorner, 1093

**Koehler, Alfred E., and Hill, Elsie.** The molecular microdistillation of cholesterol and cholesterol esters, 1

**Kozloff, Lloyd M.** See *Putnam, Kozloff, and Neil*, 303

**Krimsky, I., and Racker, E.** Protection of glycolysis in mouse brain homogenates by amides and esters of amino acids, 903

**Kritchevsky, Theodore H., and Gallagher, T. F.** Partial synthesis of compounds related to adrenal cortical hormones. XII. Preparation of 17-hydroxyprogesterone and other 17α-hydroxy-20-ketosteroids, 507

L

**Langham, Wright H.** See *Goldblith, Proctor, Hogness, and Langham*, 1163

—. See *Nyc, Mitchell, Leifer, and Langham*, 783

**Lanni, Frank, Sharp, D. G., Eckert, Edward A., Dillon, Edith S., Beard, Dorothy, and Beard, J. W.** The egg white inhibitor of influenza virus hemagglutination. I. Preparation and properties of semipurified inhibitor, 1275

**Lardy, Henry A., and Feldott, Gladys.** The net utilization of ammonium nitrogen by the growing rat, 509

—, **Potter, Richard L., and Burris, R. H.** Metabolic functions of biotin. I. The rôle of biotin in bicarbonate utilization by *Lactobacillus arabinosus* studied with $C^{14}$, 721

—. See *MacLeod and Lardy*, 733

**Leder, Irwin G.** See *Rosen, Perlzweig, and Leder*, 157

**Lederberg, Joshua.** See *Doudoroff, Hassid, Putman, Potter, and Lederberg*, 921

**Lehninger, Albert L.** See *Kennedy and Lehninger*, 957

**Leifer, Edgar.** See *Nyc, Mitchell, Leifer, and Langham*, 783

**Leloir, Luis F.** See *Caputto, Leloir, Trucco, Cardini, and Paladini*, 497

**LePage, G. A., and Potter, Van R.** Effect of trace impurities in adenosine triphosphate, 1229

**Lepkovsky, Samuel.** See *Heidelberger, Abraham, and Lepkovsky*, 151

—. See *Heidelberger, Gullberg, Morgan, and Lepkovsky*, 143

**Levine, R., Goldstein, M., Klein, S., and Huddlestun, B.** The action of insulin on the distribution of galactose in eviscerated nephrectomized dogs, 985

**Levy, Betty B.** See *Brodie, Axelrod, Soberman, and Levy*, 25

—. See *Soberman, Brodie, Levy, Axelrod, Hollander, and Steele*, 31

**Lindgren, Frank T.** See *Gofman, Lindgren, and Elliott*, 973

**Lipmann, Fritz.** See *Barker and Lipmann*, 247

—. See *Loomis and Lipmann*, 503

**London, Irving M., Shemin, David, West, Randolph, and Rittenberg, D.** Heme synthesis and red blood cell dynamics in normal humans and in subjects with polycythemia vera, sickle-cell anemia, and pernicious anemia, 463

**Loo, Y. H.** See *Carter, Loo, and Rothrock*, 1027

**Loomis, W. F., and Lipmann, Fritz.** Inhibition of phosphorylation by azide in kidney homogenate, 503

**Lotspeich, William D.** The rôle of insulin in the metabolism of amino acids, 175

**Lowy, Peter H.** See *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 689, 705

**Luck, J. Murray.** See *Jagannathan and Luck*, 561, 569

**Ludewig, Stephan, and Chanutin, Alfred.** Factors influencing the agglutination of red blood cells, red blood cell stroma, and lymphocytes, 271

**Ludwig, Marion I.** See *Harris and Ludwig*, 1111

M

**MacLeod, Patricia R., and Lardy, Henry A.** Metabolic functions of biotin. II. The fixation of carbon dioxide by normal and biotin-deficient rats, 733

**Main, Edna R.** See *Neuman, Neuman, Main, and Mulryan*, 325, 335, 341

**Marshall, Charles W., and Gallagher, T. F.** Partial synthesis of compounds related to adrenal cortical hormones. XIII. 3α,11α-Dihydroxy-17α-steroids, 1265

**Marshall, Lawrence M., Orten, James M., and Smith, Arthur H.** The determination of fumaric acid in animal tissues by partition chromatography, 1127

**Mason, Harold L., Kepler, Edwin J., and Schneider, John J.** Metabolism of dehydroisoandrosterone in a woman before and after removal of an adrenocortical tumor, 615

**Masoro, E. J., Chaikoff, I. L., and Dauben, W. G.** Lipogenesis from glucose in the normal and liverless

animal as studied with $C^{14}$-labeled glucose, 1117
**Mathis, Alice L.** See *Davis, Mathis, Howton, Schneiderman, and Mead*, 383
**McClure, Lawrence E.** See *Dunn, McClure, and Merrifield*, 11
**McGinty, D. A.** See *Glazko, McGinty, Dill, Wilson, and Ward*, 409
**Mead, James F.** See *Davis, Mathis, Howton, Schneiderman, and Mead*, 383
**Merrifield, R. Bruce.** See *Dunn, McClure, and Merrifield*, 11
**Meyerhof, Otto,** and **Oesper, Peter.** The enzymatic equilibria of phospho(enol)pyruvate, 1371
**Mirsky, A. E.** See *Daly and Mirsky*, 981
**Mitchell, Herschel K.** See *Nyc, Mitchell, Leifer, and Langham*, 783
**Moersch, G. W.** See *Swendseid, Wittle, Moersch, Bird, and Brown*, 1175
**Moore, Carl V.** See *Grinstein, Kamen, and Moore*, 359
**Moore, Dan H.,** and **Harris, T. N.** Occurrence of hyaluronidase inhibitors in fractions of electrophoretically separated serum, 377
—. See *Harris, Moore, and Farber*, 369
**Morgan, Agnes Fay.** See *Heidelberger, Gullberg, Morgan, and Lepkovsky*, 143
**Morton, Avery A.,** and **Slaunwhite, Wilson R., Jr.** Polymerization of 6-hydroxyindoles and its relation to the formation of melanin, 259
**Moubasher, Radwan,** and **Awad, William Ibrahim.** Microestimation of α-amino acids with *peri*-naphthindan-2,3,4-trione hydrate, 915
**Mulryan, B. J.** See *Neuman, Neuman, Main, and Mulryan*, 325, 335, 341

N

**Nachmansohn, David.** See *Augustinsson and Nachmansohn*, 543
**Neil, Janice C.** See *Putnam, Kozloff, and Neil*, 303
**Neuman, M. W.** See *Neuman, Neuman, Main and Mulryan*, 325, 335, 341
**Neuman, W. F., Neuman, M. W., Main, Edna, R.,** and **Mulryan, B. J.** The deposition of uranium in bone. IV. Adsorption studies *in vitro*, 325
—, —, —, and —. V. Ion exchange studies, 335
—, —, —, and —. VI. Ion competition studies, 341
**Norris, L. C.** See *Gillis and Norris*, 487
**Norris, R. F.** See *Tomarelli, Norris, and György*, 485
**Nutting, M.-D. Fellows.** See *Jansen, Nutting, and Balls*, 201
—. See *Jansen, Nutting, Jang, and Balls*, 189
**Nyc, Joseph F., Mitchell, Herschel K., Leifer, Edgar,** and **Langham, Wright H.** The use of isotopic carbon in a study of the metabolism of anthranilic acid in *Neurospora*, 783

O

**Ochoa, Severo.** See *Stern and Ochoa*, 491
**Oesper, Peter.** See *Meyerhof and Oesper*, 1371
**Orten, James M.** See *Marshall, Orten, and Smith*, 1127

P

**Paladini, A. C.** See *Caputto, Leloir, Trucco, Cardini, and Paladini*, 497
**Pappas, Anne.** See *Ratner and Pappas*, 1183, 1199
**Pardee, Arthur B.** Measurement of oxygen uptake under controlled pressures of carbon dioxide, 1085
**Park, James T.,** and **Johnson, Marvin J.** Accumulation of labile phosphate in *Staphylococcus aureus* grown in the presence of penicillin, 585
**Pearlman, W. H.,** and **DeMelo, R. H.** The metabolism of α-estradiol *in vitro*, 1141
**Perlman, D.** A chemical method for the determination of mannosidostreptomycin, 1147

**Perlmann, Gertrude E., and Kaufman, Dorothy.** The effect of acetic acid on the stability of serum proteins, 133
**Perlzweig, William A.** See *Rosen, Perlzweig, and Leder*, 157
**Petering, H. G.** See *Schmitt and Petering*, 489
**Phillips, Paul H.** See *Hansen and Phillips*, 523
**Ponticorvo, L., Rittenberg, D., and Bloch, Konrad.** The utilization of acetate for the synthesis of fatty acids, cholesterol, and protoporphyrin, 839
**Posternak, T. Z.** See *Sutherland, Posternak, and Cori*, 501
**Potter, A. L.** See *Doudoroff, Hassid, Putman, Potter, and Lederberg*, 921
**Potter, Richard L.** See *Lardy, Potter, and Burris*, 721
**Potter, Van R.** See *LePage and Potter*, 1229
**Price, Vincent E., Gilbert, James B., and Greenstein, Jesse P.** The resolution of several racemic amino acids, 1169
**Proctor, Bernard E.** See *Goldblith, Proctor, Hogness, and Langham*, 1163
**Putman, E. W.** See *Doudoroff, Hassid, Putman, Potter, and Lederberg*, 921
**Putnam, Frank W., Kozloff, Lloyd M., and Neil, Janice C.** Biochemical studies of virus reproduction. I. Purification and properties of *Escherichia coli* bacteriophage $T_4$, 303

R

**Racker, E.** See *Krimsky and Racker*, 903
**Ratner, S., and Pappas, Anne.** Biosynthesis of urea. I. Enzymatic mechanism of arginine synthesis from citrulline, 1183
— and —. II. Arginine synthesis from citrulline in liver homogenates, 1199
**Reichard, Peter.** On the nitrogen turnover in purines from polynucleotides determined with glycine $N^{15}$, 773
—. Preparation of ribonucleosides from small amounts of ribonucleic acid, 763
—. See *Arvidson, Eliasson, Hammarsten, Reichard, von Ubisch, and Bergström*, 169
**Rittenberg, D.** See *Borek and Rittenberg*, 843

# INDEX TO SUBJECTS

A

**Acetate:** Carbon-labeled, glycogen origin, use in study, *Topper and Hastings*, 1255

Cholesterol synthesis, utilization, *Ponticorvo, Rittenberg, and Bloch*, 839

Citric acid synthesis, enzymatic, relation, *Stern and Ochoa*, 491

Fatty acid synthesis, utilization, *Ponticorvo, Rittenberg, and Bloch*, 839

Oxal-. *See* Oxalacetate

Protoporphyrin synthesis, utilization, *Ponticorvo, Rittenberg, and Bloch*, 839

Radioactive, liver proteins, incorporation *in vitro*, *Anfinsen, Beloff, and Solomon*, 1001

**Acetic acid:** Aceto-. *See* Acetoacetic acid

Blood serum proteins, effect, *Perlmann and Kaufman*, 133

**Acetic acid-α-$C^{14}$:** Indole-3-, synthesis, *Heidelberger*, 139

**Acetoacetic acid:** Blood, determination, colorimetric, *Rosenthal*, 1235

**Acetone:** Metabolism, liver, *Borek and Rittenberg*, 843

**Acetylcholinesterase:** Inhibition, kinetics, *Augustinsson and Nachmansohn*, 543

**Adenosinetriphosphatase:** Muscle, vitamin E deficiency, *Carey and Dziewiatkowski*, 119

**Adenosine triphosphate:** Glutamine synthesis, enzymatic, relation, *Speck*, 1405

Impurities, effect, *LePage and Potter*, 1229

**Adrenal(s):** Cortex hormone, related compounds, synthesis, *Kritchevsky and Gallagher*, 507

*Marshall and Gallagher*, 1265

— tumor, dehydroisoandrosterone metabolism, effect, *Mason, Kepler, and Schneider*, 615

**Alanine:** Phenyl-. *See* Phenylalanine

β-2-Thienyl-, phenylalanine-low diet, effect, *Ferger and du Vigneaud*, 61

**Alkaloid(s):** Veratrine, *Sato and Jacobs*, 623

**Amidase:** Trypsin, kinetics, *Schwert and Eisenberg*, 665

**Amino acid(s):** Amides brain glycolysis, effect, *Krimsky and Racker*, 903

Bone phosphatase, magnesium and cobalt with, effect, *Bodansky*, 81

— sarcoma phosphatase, magnesium and cobalt with, effect, *Bodansky*, 81

Determination, micro-, *peri*-naphthindan-2,3,4-trione hydrate use, *Moubasher and Awad*, 915

Esters, brain glycolysis, effect, *Krimsky and Racker*, 903

Intestine phosphatase, magnesium and cobalt with, effect, *Bodansky*, 81

Metabolism, insulin rôle, *Lotspeich*, 175

—, parenteral administration effect, *Handler, Kamin, and Harris*, 283

Racemic, resolution, *Price, Gilbert, and Greenstein*, 1169

Sulfur-containing, ethionine with, growth effect, *Stekol and Weiss*, 1049

**Amino-β-hydroxyisovaleric acid:** α-, determination, *Stevens and Halpern*, 389

**Ammonium nitrogen:** Growth, effect, *Lardy and Feldott*, 509

**Amylase:** α-, blood, determination, photometric, starch-iodine color, *Smith and Roe*, 53

—, crystalline, barley, isolation and properties, *Schwimmer and Balls*, 1063

—, urine, determination, photometric, starch-iodine color, *Smith and Roe*, 53

**Androsterone:** Dehydro-, metabolism, adrenocortical tumor effect, *Mason, Kepler, and Schneider*, 615

**Anemia:** Pernicious, heme synthesis and red blood cell dynamics, *London, Shemin, West, and Rittenberg,* 463
Sickel-cell, heme synthesis and red blood cell dynamics, *London, Shemin, West, and Rittenberg,* 463
**Anthranilic acid:** Metabolism, *Neurospora,* isotopic carbon in study, *Nyc, Mitchell, Leifer, and Langham,* 783
**Antipyrine:** Biological materials, determination, use, *Brodie, Axelrod, Soberman, and Levy,* 25
Body water measurement, use, *Soberman, Brodie, Levy, Axelrod, Hollander, and Steele,* 31
**Aorta:** Thoracic, respiration, *Briggs, Chernick, and Chaikoff,* 103
**Apparatus:** Cartesian diver technique, *Claff and Tahmisian,* 577
**Arginine:** Synthesis from citrulline, enzymatic, mechanism, *Ratner and Pappas,* 1183
— — —, liver homogenates, *Ratner and Pappas,* 1199
**Artery:** Fatty acid formation, *in vitro,* $C^{14}$ and $P^{32}$ as indicators, *Chernick, Srere, and Chaikoff,* 113
Phospholipide formation, *in vitro,* $C^{14}$ and $P^{32}$ as indicators, *Chernick, Srere, and Chaikoff,* 113
Tissue, metabolism, *Briggs, Chernick, and Chaikoff,* 103
*Chernick, Srere, and Chaikoff,* 113
**Aspartic acid:** L-, metabolism, *Wu and Rittenberg,* 847
**Aspartic oxidase:** D-, *Still, Buell, Knox, and Green,* 831
**Azide:** Kidney phosphorylation, effect, *Loomis and Lipmann,* 503

B

**Bacillus:** *See also Lactobacillus*
**Bacteria:** *See also Escherichia, Propionibacterium, Staphylococcus*
**Bacteriophage:** $T_6$, *Escherichia coli,* purification and properties, *Putnam, Kozloff, and Neil,* 303
**Barley:** α-Amylase, crystalline, isolation and properties, *Schwimmer and Balls,* 1063
**Bean(s):** Lima, growth-inhibiting fraction, growth effect, *Tauber, Kershaw, and Wright,* 1155
—, trypsin inhibitor, crystalline, isolation, *Tauber, Kershaw, and Wright,* 1155
**Benadryl:** *See* Diphenhydramine
**Benzene:** *N,N*-Dimethyl-*p*-aminoazo-, destruction, liver riboflavin, diet effect, *Kensler,* 1079
**Bicarbonate:** *Lactobacillus arabinosus* utilization, biotin rôle, $C^{14}$ in study, *Lardy, Potter, and Burris,* 721
**Biotin:** Bicarbonate utilization by *Lactobacillus arabinosus,* rôle, $C^{14}$ in study, *Lardy, Potter, and Burris,* 721
Carbon dioxide fixation, effect, *MacLeod and Lardy,* 733
Determination, *Neurospora crassa* use, oleic acid effect, *Hodson,* 49
Metabolic functions, *Lardy, Potter, and Burris,* 721
*MacLeod and Lardy,* 733
**Blood:** Acetoacetic acid, determination, colorimetric, *Rosenthal,* 1235
α-Amylase determination, photometric, starch-iodine color, *Smith and Roe,* 53
Protein, transfer, *Hansen and Phillips,* 523
Pteroylglutamic acid-related pterins, effect, *Swendseid, Wittle, Moersch, Bird, and Brown,* 1175
**Blood cell(s):** Red, agglutination, *Ludewig and Chanutin,* 271
—, dynamics, polycythemia and anemia, *London, Shemin, West, and Rittenberg,* 463
—, stroma, agglutination, *Ludewig and Chanutin,* 271
—, substrate utilization, *Spicer and Clark,* 987
**Blood plasma:** Hydrogen ion concentration, determination, photometric, *Van Slyke, Weisiger, and Van Slyke,* 743
**Blood serum:** Copper, determination, *Robinson,* 1103

**Blood serum**—*continued:*
**Fractions**, hyaluronidase, *Moore and Harris*, 377
**Lipoproteins**, ultracentrifugation, *Gofman, Lindgren, and Elliott*, 973
**Proteins**, acetic acid effect, *Perlmann and Kaufman*, 133
—, coagulation, heat, *Huggins and Jensen*, 645
—, —, iodoacetate and iodoacetamide effect, *Huggins and Jensen*, 645
—, —, sulfhydryl groups, effect, *Huggins and Jensen*, 645
**Blood sugar:** Arteriovenous differences, *Somogyi*, 217, 1289
**Insulin** effect, *Somogyi*, 217
— injection and glucose feeding, effect, *Somogyi*, 1289
**Body fluid(s):** Hyaluronidase effect, *Wattenberg and Glick*, 1213
**Bone:** Phosphatase, amino acids with magnesium and cobalt, effect, *Bodansky*, 81
**Sarcoma**, phosphatase, amino acids with magnesium and cobalt, effect, *Bodansky*, 81
**Uranium** adsorption *in vitro*, *Neuman, Neuman, Main, and Mulryan*, 325
— deposition, *Neuman, Neuman, Main, and Mulryan*, 325, 335, 341
— —, ion competition, *Neuman, Neuman, Main, and Mulryan*, 341
—, ion exchange, *Neuman, Neuman, Main, and Mulryan*, 335
**Brain:** Glycolysis, amino acid amides and esters, effect, *Krimsky and Racker*, 903

C

**Caffeine:** Urine, determination, *Fisher, Algeri, and Walker*, 71
—, excretion, *Fisher, Algeri, and Walker*, 71
**Calcification:** Tooth, *Sobel, Hanok, Kirshner, and Fankuchen*, 205
**Carbohydrate(s):** Metabolism, *Trypanosoma hippicum, Harvey*, 435
**Carbon:** Isotopic, anthranilic acid metabolism, *Neurospora*, use in study, *Nyc, Mitchell, Leifer, and Langham*, 783
**Carbon**—*continued:*
-Labeled glucose, metabolism, diaphragm, *in vitro, Villee and Hastings*, 673
Labeled, plant sugars, distribution, *Gibbs*, 499
Radioactive, artery fatty acid and phospholipide formation *in vitro*, indicator, *Chernick, Srere, and Chaikoff*, 113
—, bicarbonate utilization, *Lactobacillus arabinosus*, biotin rôle, use in study, *Lardy, Potter, and Burris*, 721
—, diphenhydramine metabolism, use in study, *Glazko, McGinty, Dill, Wilson, and Ward*, 409
**Carbon$^{14}$:** Niacin-tagged, cathode rays, effect, *Goldblith, Proctor, Hogness, and Langham*, 1163
**Carbon dioxide:** Carbon-labeled, glycogen origin, use in study, *Topper and Hastings*, 1255
Fixation, biotin, effect, *MacLeod and Lardy*, 733
Oxygen uptake determination, effect, *Pardee*, 1085
Radioactive, liver proteins, incorporation *in vitro*, *Anfinsen, Beloff, and Solomon*, 1001
**Carbon$^{14}$ dioxide:** Plant sugars, photosynthesis, labeled carbon distribution, *Gibbs*, 499
**Carboxylase:** Code-, pyridoxal-3-phosphate, relation, *Umbreit and Gunsalus*, 279
**Carboxylic acid:** Tri-, cycle, intermediates, oxidation, liver mitochondria, *Kennedy and Lehninger*, 957
**Carboxypeptidase:** Optical specificity, *Hanson and Smith*, 815
Pancreas, *Smith and Hanson*, 803
**Carcinogen:** *See also N,N*-Dimethyl-*p*-aminoazobenzene
**Carnosinase:** *Hanson and Smith*, 789
**Cartesian diver:** Technique, *Claff and Tahmisian*, 577
**Catalase:** -Cyanide reaction, *Chance*, 1299

**Catalase**—*continued:*
-Ethyl hydrogen peroxide compounds, *Chance*, 1331, 1341
— — — —, kinetics and activity, *Chance*, 1341
— — — —, spectra, *Chance*, 1331
-Methyl hydrogen peroxide compounds, *Chance*, 1331, 1341
— — — —, kinetics and activity, *Chance*, 1341
— — — —, spectra, *Chance*, 1331
-Peroxide complexes, composition, *Chance*, 1311
**Cathode ray:** $C^{14}$-labeled niacin, effect, *Goldblith, Proctor, Hogness, and Langham*, 1163
**Chlorophyll:** *c*-, pheoporphyrin nature, *Granick*, 505
**Cholesterol:** Microdistillation, molecular, *Koehler and Hill*, 1
Synthesis, acetate utilization, *Ponticorvo, Rittenberg, and Bloch*, 839
**Cholesterol ester(s):** Microdistillation, molecular, *Koehler and Hill*, 1
**Choline:** Ethionine with, growth effect, *Stekol and Weiss*, 1049
Methyl groups, serine β-carbon formation, relation, *Sakami*, 495
**Cholinesterase:** *Augustinsson and Nachmansohn*, 543
Acetyl-, inhibition, kinetics, *Augustinsson and Nachmansohn*, 543
**Chymotrypsin:** α-, sedimentation, *Schwert*, 655
Diisopropyl fluorophosphate effect, *Jansen, Nutting, and Balls*, 201
γ-, sedimentation, *Schwert*, 655
Inhibited, crystallization, *Jansen, Nutting, Jang, and Balls*, 189
Proteinase and esterase activity, diisopropyl fluorophosphate effect, *Jansen, Nutting, Jang, and Balls*, 189
**Chymotrypsinogen:** Sedimentation, *Schwert*, 655
**Citrate:** Formation, kidney cortex extracts, *Kalnitsky*, 1015
**Citric acid:** Synthesis, enzymatic, acetate and oxalacetate condensation, *Stern and Ochoa*, 491
**Citrulline:** Arginine synthesis from, enzymatic, mechanism, *Ratner and Pappas*, 1183
— — —, liver homogenates, *Ratner and Pappas*, 1199
**Coagulation:** Blood serum proteins, heat, *Huggins and Jensen*, 645
— — —, sulfhydryl groups, iodoacetate, and iodoacetamide effect, *Huggins and Jensen*, 645
**Cobalt:** Bone phosphatase, amino acids with, effect, *Bodansky*, 81
— sarcoma phosphatase, amino acids with, effect, *Bodansky*, 81
Intestine phosphatase, amino acids with, effect, *Bodansky*, 81
**Codecarboxylase:** Pyridoxal-3-phosphate, relation, *Umbreit and Gunsalus*, 279
**Colostrum:** Proteins, *Hansen and Phillips*, 523
**Copper:** Blood serum, determination, *Robinson*, 1103
**Cresol:** *p*-, phenol and, urine, determination, *Schmidt*, 211
**Cyanide:** -Catalase reaction, *Chance*, 1299
**Cyclophorase:** System, *Still, Buell, Knox, and Green*, 831
**Cystathionine:** Diketopiperazines, growth, effect, *Stekol and Weiss*, 1057
**Cystine:** L-, radioactive, resolution, *Wood and Gutmann*, 535
Preparation, sulfur, radioactive, use, *Wood and Van Middlesworth*, 529
Sulfur$^{35}$-containing, $S^{35}$-homolanthionine conversion to, *Stekol and Weiss*, 67
**Cytochrome:** Oxidase, determination, colorimetric, *Smith and Stotz*, 891

D

**Dehydroandrosterone:** Metabolism, adrenocortical tumor effect, *Mason, Kepler, and Schneider*, 615
**Desoxyriboside:** *Lactobacillus bifidus* requirement, vitamin $B_{12}$ relation, *Tomarelli, Norris, and György*, 485
**Deuterium:** Thyroid action, use in study, *Karp and Stetten*, 819

**Diamino-β-hydroxyglutaric acid:** α,γ-, *Carter, Loo, and Rothrock,* 1027
**Diaphragm:** Glucose, carbon-labeled, metabolism, *in vitro, Villee and Hastings,* 673
**Diet:** Liver riboflavin, *N,N*-dimethyl-*p*-aminoazobenzene destruction, effect, *Kensler,* 1079
— xanthine oxidase, effect, *Schmitt and Petering,* 489
**Dihydroxyphenylalanine:** Metabolism, kidney extracts, *Clegg and Sealock,* 1037
**Dihydroxy-17α-steroids:** 3α,11α-, synthesis, *Marshall and Gallagher,* 1265
**Diisopropyl fluorophosphate:** Chymotrypsin, effect, *Jansen, Nutting, and Balls,* 201
— proteinase and esterase, effect, *Jansen, Nutting, Jang, and Balls,* 189
Trypsin proteinase and esterase, effect, *Jansen, Nutting, Jang, and Balls,* 189
**Diketopiperazine(s):** Cystathionine, homolanthionine, and methionine, growth effect, *Stekol and Weiss,* 1057
**Dimethyl-*p*-aminoazobenzene:** *N,N*-, destruction, liver riboflavin, diet effect, *Kensler,* 1079
**Dinitrophenyl insulin:** Peptides, isolation, enzyme digests, *Woolley,* 593
**Dinitrophenyl trypsinogen:** Peptides, isolation, enzyme digests, *Woolley,* 593
**Diphenhydramine:** Biochemistry, *Dill and Glazko,* 395
*Glazko and Dill,* 403
*Glazko, McGinty, Dill, Wilson, and Ward,* 409
*Glazko and Dill,* 417
Determination, chemical, *Dill and Glazko,* 395
Metabolism, radioactive carbon in study, *Glazko, McGinty, Dill, Wilson, and Ward,* 409
Tissue enzymes, effect, *Glazko and Dill,* 417
Tissues, *Glazko and Dill,* 403
Urine excretion, *Glazko and Dill,* 403

E

**Egg:** White, inhibitor, influenza virus hemagglutination, *Lanni, Sharp, Eckert, Dillon, Beard, and Beard,* 1275
—, —, preparation and properties, *Lanni, Sharp, Eckert, Dillon, Beard, and Beard,* 1275
Yolk, livetin, electrophoresis, *Shepard and Hottle,* 349
**Enzyme(s):** Arginine synthesis from citrulline, mechanism, *Ratner and Pappas,* 1183
Citric acid synthesis, acetate and oxalacetate condensation, *Stern and Ochoa,* 491
Galactose transformation into glucose derivatives, rôle, *Caputto, Leloir, Trucco, Cardini, and Paladini,* 497
Glutamine synthesis, adenosine triphosphate, relation, *Speck,* 1405
Kidney, *Hanson and Smith,* 789
Mucolytic-, systems, *Wattenberg and Glick,* 1213
Phospho(enol)pyruvate equilibrium, *Meyerhof and Oesper,* 1371
Tissue, diphenhydramine degradation, *Glazko and Dill,* 417
Xanthine and xanthopterin oxidation by pteridines, effect, *Hofstee,* 633
*See also* Adenosinetriphosphatase, Amidase, etc.
**Erythrocyte:** *See* Blood cell, red
**Escherichia coli:** Bacteriophage $T_6$, purification and properties, *Putnam, Kozloff, and Neil,* 303
Maltose utilization, *Doudoroff, Hassid, Putman, Potter, and Lederberg,* 921
**Esterase:** Choline. *See* Cholinesterase
Trypsin and chymotrypsin, diisopropyl fluorophosphate effect, *Jansen, Nutting, Jang, and Balls,* 189
—, kinetics, *Schwert and Eisenberg,* 665
**Estradiol:** α-, metabolism *in vitro, Pearlman and DeMeio,* 1141
**Estrogen(s):** Synthetic, metabolism, *Starnes and Teague,* 43
Urine sulfur partition, administration effect, *Starnes and Teague,* 43
**Ethionine:** Sulfur-containing amino acids and choline and, growth effect, *Stekol and Weiss,* 1049

F

**Fatty acid(s):** Artery, formation *in vitro*, $C^{14}$ and $P^{32}$ as indicators, *Chernick, Srere, and Chaikoff*, 113
Oxidation, liver mitochondria, *Kennedy and Lehninger*, 957
Synthesis, acetate utilization, *Ponticorvo, Rittenberg, and Bloch*, 839
**Fibrin:** Electron microscopy, *Hall*, 857
**Fibrinogen:** Electron microscopy, *Hall*, 857
**Folic acid:** Conjugate, yeast, extraction, *Greene*, 1075
*See also* Pteroylglutamic acid
**Fumaric acid:** Tissues, determination, chromatographic, *Marshall, Orten, and Smith*, 1127

G

**Galactose:** Distribution, nephrectomy, insulin effect, *Levine, Goldstein, Klein, and Huddlestun*, 985
Glucose derivatives from, enzymatic transformation, *Caputto, Leloir, Trucco, Cardini, and Paladini*, 497
**Glucomutase:** Phospho-, *Jagannathan and Luck*, 561, 569
—, mechanism of action, *Jagannathan and Luck*, 569
*Sutherland, Posternak, and Cori*, 501
—, purification and properties, *Jagannathan and Luck*, 561
**Glucose:** Blood sugar, insulin injection and, effect, *Somogyi*, 1289
Carbon-labeled, metabolism, diaphragm, *in vitro*, *Villee and Hastings*, 673
Derivatives, galactose transformation to, enzymatic, *Caputto, Leloir, Trucco, Cardini, and Paladini*, 497
Labeled, lipogenesis, hepatectomy, *Masoro, Chaikoff, and Dauben*, 1117
Lipogenesis, hepatectomy, $C^{14}$ in study, *Masoro, Chaikoff, and Dauben*, 1117
**Glutamic acid:** *Lactobacillus arabinosus*, utilization, *Camien and Dunn*, 935
Pteroyl. *See* Pteroylglutamic acid
**Glutamine:** Synthesis, enzymatic, adenosine triphosphate, relation, *Speck*, 1405
—, liver, *Speck*, 1387
**Glutaric acid:** $\alpha,\gamma$-Diamino-$\beta$-hydroxy-, *Carter, Loo, and Rothrock*, 1027
**Glutathione:** Synthesis, liver, *Bloch*, 1245
—, — extracts, cell-free, *Johnston and Bloch*, 493
**Glyceric acid:** Phospho-, mutase, mechanism of action, *Sutherland, Posternak, and Cori*, 501
**Glycine:** Hemoglobin biosynthesis, utilization, *Grinstein, Kamen, and Moore*, 359
Metabolism, parenteral administration effect, *Handler, Kamin, and Harris*, 283
Nitrogen$^{15}$-containing, polynucleotide purines, nitrogen turnover, use in study, *Reichard*, 773
**Glycogen:** Origin, $C^{14}$-labeled carbon dioxide, acetate, and pyruvate in study, *Topper and Hastings*, 1255
**Glycolysis:** Brain, amino acid amides and esters, effect, *Krimsky and Racker*, 903
**Growth:** Ammonium nitrogen effect, *Lardy and Feldott*, 509
Cystathionine diketopiperazines, effect, *Stekol and Weiss*, 1057
Ethionine and sulfur-containing amino acids and choline, effect, *Stekol and Weiss*, 1049
Homolanthionine diketopiperazines, effect, *Stekol and Weiss*, 1057
Lima bean fraction, effect, *Tauber, Kershaw, and Wright*, 1155
Methionine diketopiperazines, effect, *Stekol and Weiss*, 1057
*Tetrahymena geleii*, *Rockland and Dunn*, 511

H

**Heme:** Synthesis, polycythemia vera and anemia, *London, Shemin, West, and Rittenberg*, 463

**Hemoglobin:** Biosynthesis, glycine utilization, *Grinstein, Kamen, and Moore,* 359
Derivatives, hyaluronidase, effect, *Wattenberg and Glick,* 1213
Metabolism, porphyria, isotopes in study, *Grinstein, Aldrich, Hawkinson, and Watson,* 983
**Hepatectomy:** Lipogenesis from glucose, $C^{14}$ in study, *Masoro, Chaikoff, and Dauben,* 1117
**Homogentisic acid:** Preparation, chemical, *Abbott and Smith,* 365
**Homolanthionine:** Diketopiperazines, growth, effect, *Stekol and Weiss,* 1057
Sulfur$^{35}$-containing, conversion to $S^{35}$-cystine, *Stekol and Weiss,* 67
**Hyaluronidase:** Blood serum fractions, *Moore and Harris,* 377
Body fluids, effect, *Wattenberg and Glick,* 1213
Hemoglobin derivatives, effect, *Wattenberg and Glick,* 1213
Steroids, effect, *Wattenberg and Glick,* 1213
Tissue extracts, effect, *Wattenberg and Glick,* 1213
**Hydramine:** Diphen-. *See* Diphenhydramine
**Hydrogen ion concentration:** Blood plasma, determination, *Van Slyke, Weisiger, and Van Slyke,* 743
Urine, determination, *Van Slyke, Weisiger, and Van Slyke,* 757
**Hydrogen peroxide:** Ethyl, catalase compounds, *Chance,* 1331, 1341
—, — —, kinetics and activity, *Chance,* 1341
—, — —, spectra, *Chance,* 1331
Methyl, catalase compounds, *Chance,* 1331, 1341
—, — —, kinetics and activity, *Chance,* 1341
—, — —, spectra, *Chance,* 1331
**Hydroxyindole(s):** 6-, polymerization, melanin formation, relation, *Morton and Slaunwhite,* 259
**Hydroxy-17-ketosteroid(s):** 3β-, hydrochloric acid hydrolysis effect, *Bitman and Cohen,* 455
**Hydroxy-20-ketosteroid(s):** 17α-, preparation, *Kritchevsky and Gallagher,* 507
**Hydroxyprogesterone:** 17α-, preparation, *Kritchevsky and Gallagher,* 507
**Hydroxyvaline:** β-, determination, *Stevens and Halpern,* 389

I

**Indole(s):** 6-Hydroxy-, polymerization, melanin formation, relation, *Morton and Slaunwhite,* 259
**Indole-3-acetic acid-α-$C^{14}$:** Synthesis, *Heidelberger,* 139
**Influenza:** Virus, hemagglutination, egg white inhibitor, *Lanni, Sharp, Eckert, Dillon, Beard, and Beard,* 1275
—, preparation and properties, *Lanni, Sharp, Eckert, Dillon, Beard, and Beard,* 1275
**Insulin:** Amino acid metabolism, rôle, *Lotspeich,* 175
Blood sugar, effect, *Somogyi,* 217
— —, glucose feeding, and, effect, *Somogyi,* 1289
Dinitrophenyl, peptides, isolation, enzyme digests, *Woolley,* 593
Galactose distribution, nephrectomy, effect, *Levine, Goldstein, Klein, and Huddlestun,* 985
**Intestine:** Phosphatase, amino acids with magnesium and cobalt, effect, *Bodansky,* 81
**Iodoacetamide:** Blood serum protein coagulation, effect, *Huggins and Jensen,* 645
**Iodoacetate:** Blood serum protein coagulation, effect, *Huggins and Jensen,* 645
**Isotope(s):** Hemoglobin metabolism, porphyria, use in study, *Grinstein, Aldrich, Hawkinson, and Watson,* 983
Porphyrin metabolism, porphyria, use in study, *Grinstein, Aldrich, Hawkinson, and Watson,* 983

J

**Jervine:** Rubi-, chemical constitution, *Sato and Jacobs,* 623

K

**Ketosteroid(s):** 17α-Hydroxy-20-, preparation, *Kritchevsky and Gallagher*, 507
3β-Hydroxy-17-, hydrochloric acid hydrolysis effect, *Bitman and Cohen*, 455
**Kidney:** Carnosinase, *Hanson and Smith*, 789
Cortex extracts, citrate formation, *Kalnitsky*, 1015
Extracts, dihydroxyphenylalanine metabolism, *Clegg and Sealock*, 1037
Phosphorylation, azide effect, *Loomis and Lipmann*, 503
*See also* Nephrectomy
**Kynurenic acid:** Tryptophan conversion to, *in vivo*, *Heidelberger, Gullberg, Morgan, and Lepkovsky*, 143
**Kynurenine:** Tryptophan conversion to, *in vivo*, *Heidelberger, Gullberg, Morgan, and Lepkovsky*, 143

L

**Lactobacillus arabinosus:** Bicarbonate utilization, biotin rôle, $C^{14}$ in study, *Lardy, Potter, and Burris*, 721
D-Glutamic acid utilization, *Camien and Dunn*, 935
**Lactobacillus bifidus:** Desoxyriboside requirement, vitamin $B_{12}$ relation, *Tomarelli, Norris, and György*, 485
**Lactobacillus brevis:** Protein hydrolysates, proline determination, use, *Dunn, McClure, and Merrifield*, 11
**Lactobacillus lactis:** Nutrition, *Koditschek, Hendlin, and Woodruff*, 1093
**Lanthionine:** Homo-, diketopiperazines, growth, effect, *Stekol and Weiss*, 1057
Sulfur$^{35}$-containing, conversion to $S^{35}$-cystine, *Stekol and Weiss*, 67
**Lima bean.** *See* Bean
**Lipide(s):** Phospho-. *See* Phospholipide
**Lipogenesis:** Glucose, hepatectomy, $C^{14}$ in study, *Masoro, Chaikoff, and Dauben*, 1117
**Lipoprotein(s):** Blood serum, ultracentrifugation, *Gofman, Lindgren, and Elliott*, 973
**Liver:** Acetone metabolism, *Borek and Rittenberg*, 843
Extracts, cell-free, glutathione synthesis, *Johnston and Bloch*, 493
Glutamine synthesis, *Speck*, 1387
Glutathione synthesis, *Bloch*, 1245
Homogenates, arginine synthesis from citrulline, *Ratner and Pappas*, 1199
Mitochondria, fatty acid and tricarboxylic acid intermediates, oxidation, *Kennedy and Lehninger*, 957
Peptide, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 705
Protein, labeled lysine incorporation, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 689
—, radioactive carbon dioxide and acetate incorporation *in vitro*, *Anfinsen, Beloff, and Solomon*, 1001
Riboflavin, *N,N*-dimethyl-*p*-aminobenzene destruction, effect, *Kensler*, 1079
Tyrosine oxidation, pteroylglutamic acid rôle, *Rodney, Swendseid, and Swanson*, 19
Xanthine oxidase, diet effect, *Schmitt and Petering*, 489
*See also* Hepatectomy
**Livetin:** Egg yolk, electrophoresis, *Shepard and Hottle*, 349
**Lymph:** Extract, lymphatic tissue, physicochemistry, *Harris, Moore, and Farber*, 369
**Lymphocyte(s):** Agglutination, *Ludewig and Chanutin*, 271
Extracts, lymphatic tissue, physicochemistry, *Harris, Moore, and Farber*, 369
**Lysine:** Labeled, liver protein homogenate, incorporation, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 689

M

**Magnesium:** Bone phosphatase, amino acids with, effect, *Bodansky*, 81
— sarcoma phosphatase, amino acids with, effect, *Bodansky*, 81
Intestine phosphatase, amino acids with, effect, *Bodansky*, 81

**Maltose:** *Escherichia coli*, utilization, *Doudoroff, Hassid, Putman, Potter, and Lederberg*, 921
**Mannosidostreptomycin:** Determination, chemical, *Perlman*, 1147
**Melanin:** Formation, 6-hydroxyindole polymerization, relation, *Morton and Slaunwhite*, 259
**Methionine:** D-, radioactive, resolution, *Wood and Gutmann*, 535
Diketopiperazines, growth, effect, *Stekol and Weiss*, 1057
**Methylating compound(s):** Animal protein factor, effect, *Gillis and Norris*, 487
**Methyl-1,4-naphthoquinone:** 2-, photochemistry, *Davis, Mathis, Howton, Schneiderman, and Mead*, 383
**Methylnicotinamide:** $N^1$-, 6-pyridone, urine, determination, fluorometric, *Rosen, Perlzweig, and Leder*, 157
**Mitochondria:** Liver, fatty acid and tricarboxylic acid intermediates, oxidation, *Kennedy and Lehninger*, 957
**Mold:** *See also* Neurospora
**Muscle:** Adenosinetriphosphatase and phosphatase, vitamin E, effect, *Carey and Dziewiatkowski*, 119
Phosphorylase, crystalline, *Hestrin*, 943
*See also* Diaphragm
**Mutase:** Phosphogluco-, *Jagannathan and Luck*, 561, 569
—, mechanism of action, *Sutherland, Posternak, and Cori*, 501
Phosphoglyceric acid, mechanism of action, *Sutherland, Posternak, and Cori*, 501
**Myoglobin:** Absorption spectra and extinction coefficients, *Bowen*, 235

N

**Naphthindan-2,3,4-trione hydrate:** *peri*-, α-amino acid determination, micro-, use, *Moubasher and Awad*, 915
**Naphthoquinone:** 2-Methyl-1,4-, photochemistry, *Davis, Mathis, Howton, Schneiderman, and Mead*, 383
**Nephrectomy:** Galactose distribution, insulin effect, *Levine, Goldstein, Klein, and Huddlestun*, 985
**Neurospora:** Anthranilic acid metabolism, isotopic carbon in study, *Nyc, Mitchell, Leifer, and Langham*, 783
**Neurospora crassa:** Biotin determination, oleic acid effect, *Hodson*, 49
**Niacin:** Carbon$^{14}$-labeled, cathode rays, effect, *Goldblith, Proctor, Hogness, and Langham*, 1163
**Nicotinamide:** $N^1$-Methyl-, 6-pyridone, urine, determination, fluorometric, *Rosen, Perlzweig, and Leder*, 157
**Nicotinic acid:** Tryptophan conversion to, *in vivo*, *Heidelberger, Gullberg, Morgan, and Lepkovsky*, 143
*Heidelberger, Abraham, and Lepkovsky*, 151
**Nitrogen:** Ammonium, growth, effect, *Lardy and Feldott*, 509
Polynucleotide purines, turnover, glycine $N^{15}$ use, *Reichard*, 773
**Nucleic acid:** Ribo-, ribonucleoside preparation from, *Reichard*, 763
**Nucleoside(s):** Ribo-, preparation from ribonucleic acid, *Reichard*, 763
**Nucleotide(s):** Poly-, purines, nitrogen turnover, glycine $N^{15}$ use, *Reichard*, 773

O

**Oleic acid:** Biotin determination with *Neurospora crassa*, effect, *Hodson*, 49
**Orotic acid:** Pyrimidine precursor, *Arvidson, Eliasson, Hammarsten, Reichard, von Ubisch, and Bergström*, 169
**Oxalacetate:** Citric acid synthesis, enzymatic, relation, *Stern and Ochoa*, 491
**Oxidase:** D-Aspartic, *Still, Buell, Knox, and Green*, 831
Cytochrome, determination, colorimetric, *Smith and Stotz*, 891
Phenol, plant, determination, colorimetric, *Smith and Stotz*, 865
Xanthine, liver, diet effect, *Schmitt and Petering*, 489

**Oxygen:** Uptake, measurement, carbon dioxide pressure, effect, *Pardee*, 1085

P

**Pancreas:** Carboxypeptidase, *Smith and Hanson*, 803
Protease, molecular size and shape, *Schwert*, 655
**Papain:** DL-Tryptophan resolution, *Hanson and Smith*, 815
**Penicillin:** *Staphylococcus aureus* labile phosphate, effect, *Park and Johnson*, 585
**Peptidase:** Carboxy-, optical specificity, *Hanson and Smith*, 815
—, pancreas, *Smith and Hanson*, 803
**Peptide(s):** Dinitrophenyl insulin and dinitrophenyl trypsinogen, enzyme digests, isolation, *Woolley*, 593
Liver, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 705
**Peroxidase:** Plant, determination, colorimetric, *Smith, Robinson, and Stotz*, 881
**Peroxide:** Catalase-, complexes, composition, *Chance*, 1311
**Phenol(s):** *p*-Cresol and, urine, determination, *Schmidt*, 211
Oxidase, plant, determination, colorimetric, *Smith and Stotz*, 865
Urine, *Schmidt*, 211
**Phenylalanine:** Dihydroxy-, metabolism, kidney extracts, *Clegg and Sealock*, 1037
-Low diet, β-2-thienylalanine effect, *Ferger and du Vigneaud*, 61
**Pheoporphyrin:** Chlorophyll *c*, *Granick*, 505
**Phosphatase:** Adenosinetri-, muscle, vitamin E deficiency, *Carey and Dziewiatkowski*, 119
Bone, amino acids with magnesium and cobalt, effect, *Bodansky*, 81
— sarcoma, amino acids with magnesium and cobalt, effect, *Bodansky*, 81
Intestine, amino acids with magnesium and cobalt, effect, *Bodansky*, 81
Muscle, vitamin E deficiency, *Carey and Dziewiatkowski*, 119
**Phosphate:** Labile, *Staphylococcus aureus*, penicillin effect, *Park and Johnson*, 585
*Propionibacterium pentosaccum* metabolism, effect, *Barker and Lipmann*, 247
**Phospho(enol)pyruvate:** Enzyme equilibrium, *Meyerhof and Oesper*, 1371
**Phosphoglucomutase:** *Jagannathan and Luck*, 561, 569
Mechanism of action, *Sutherland, Posternak, and Cori*, 501
*Jagannathan and Luck*, 569
Purification and properties, *Jagannathan and Luck*, 561
**Phosphoglyceric acid:** Mutase, mechanism of action, *Sutherland, Posternak, and Cori*, 501
**Phospholipide(s):** Artery, formation *in vitro*, $C^{14}$ and $P^{32}$ as indicators, *Chernick, Srere, and Chaikoff*, 113
**Phosphorus:** Radioactive, artery fatty acid and phospholipide formation *in vitro*, indicator, *Chernick, Srere, and Chaikoff*, 113
**Phosphorylase:** Crystalline, muscle, *Hestrin*, 943
**Phosphorylation:** Kidney azide effect, *Loomis and Lipmann*, 503
**Piperazine(s):** Diketo-, cystathionine, homolanthionine, and methionine, growth effect, *Stekol and Weiss*, 1057
**Plant:** Peroxidase, determination, colorimetric, *Smith, Robinson, and Stotz*, 881
Phenol oxidase, determination, colorimetric, *Smith and Stotz*, 865
Sugars, labeled carbon distribution, *Gibbs*, 499
**Polycythemia vera:** Heme synthesis and red blood cell dynamics, *London, Shemin, West, and Rittenberg*, 463
**Polynucleotide(s):** Purines, nitrogen turnover, glycine $N^{15}$ use, *Reichard*, 773
**Porphyria:** Porphyrin and hemoglobin metabolism, isotopes in study, *Grinstein, Aldrich, Hawkinson, and Watson*, 963

**Porphyrin:** Metabolism, porphyria, isotopes in study, *Grinstein, Aldrich, Hawkinson, and Watson,* 983
Pheo-, chlorophyll *c*, *Granick,* 505
Proto-, synthesis, acetate utilization, *Ponticorvo, Rittenberg, and Bloch,* 839
**Progesterone:** 17-Hydroxy-, preparation, *Kritchevsky and Gallagher,* 507
**Proline:** Protein hydrolysates, determination, *Lactobacillus brevis* use, *Dunn, McClure, and Merrifield,* 11
**Propionibacterium pentosaceum:** Metabolism, phosphate effect, *Barker and Lipmann,* 247
**Protease:** Pancreatic, molecular size and shape. *Schwert,* 655
**Protein(s):** Blood serum, acetic acid effect, *Perlmann and Kaufman,* 133
— —, coagulation, heat, *Huggins and Jensen,* 645
— —, —, sulfhydryl groups, iodoacetate, and iodoacetamide effect, *Huggins and Jensen,* 645
—, transfer, *Hansen and Phillips,* 523
Colostrum, *Hansen and Phillips,* 523
Factor, animal, methylating compounds, effect, *Gillis and Norris,* 487
Hydrolysates, proline determination, *Lactobacillus brevis* use, *Dunn, McClure, and Merrifield,* 11
Lipo-, blood serum ultracentrifugation, *Gofman, Lindgren, and Elliott,* 973
**Liver,** labeled lysine incorporation, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy,* 689
—, radioactive carbon dioxide and acetate incorporation *in vitro*, *Anfinsen, Beloff, and Solomon,* 1001
**Proteinase:** Trypsin and chymotrypsin, diisopropyl fluorophosphate effect, *Jansen, Nutting, Jang, and Balls,* 189
**Protoporphyrin:** Synthesis, acetate utilization, *Ponticorvo, Rittenberg, and Bloch,* 839
**Protozoa:** *See also Tetrahymena, Trypanosoma*
**Pteridine(s):** Xanthine oxidation, enzymatic, effect, *Hofstee,* 633
Xanthopterin oxidation, enzymatic, effect, *Hofstee,* 633
**Pterin(s):** Pteroylglutamic acid-related, blood, effect, *Swendseid, Wittle, Moersch, Bird, and Brown,* 1175
**Pteroylglutamic acid:** Liver tyrosine oxidation, rôle, *Rodney, Swendseid, and Swanson,* 19
-Related pterins, blood, effect, *Swendseid, Wittle, Moersch Bird, and Brown,* 1175
*See also* Folic acid
**Purine(s):** Chromatography, *Daly and Mirsky,* 981
Polynucleotides, nitrogen turnover, glycine $N^{15}$ use, *Reichard,* 773
Substituted, biological activity, *Kidder and Dewey,* 181
**Pyridoxal-3-phosphate:** Codecarboxylase, relation, *Umbreit and Gunsalus,* 279
**Pyrimidine(s):** Chromatography, *Daly and Mirsky,* 981
Orotic acid as precursor, *Arvidson, Eliasson, Hammarsten, Reichard, von Ubisch, and Bergström,* 169
**Pyruvate:** Carbon-labeled, glycogen origin, use in study, *Topper and Hastings,* 1255
Phospho(enol)-, enzyme equilibrium, *Meyerhof and Oesper,* 1371

## R

**Ray:** Cathode. *See* Cathode ray
**Riboflavin:** Liver, *N,N*-dimethyl-*p*-aminoazobenzene destruction, effect, *Kensler,* 1079
**Ribonucleic acid:** Ribonucleoside preparation from, *Reichard,* 763
**Ribonucleoside(s):** Preparation from ribonucleic acid, *Reichard,* 763
**Riboside:** Desoxy-, *Lactobacillus bifidus* requirement, vitamin $B_{12}$ relation, *Tomarelli, Norris, and György,* 485
**Rubijervine:** Chemical constitution, *Sato and Jacobs,* 623

S

**Sarcoma:** Bone, phosphatase, amino acids with magnesium and cobalt, effect, *Bodansky*, 81
**Serine:** β-Carbon formation, choline methyl groups, relation, *Sakami*, 495
**Staphylococcus aureus:** Phosphate, labile, penicillin effect, *Park and Johnson*, 585
**Steroid(s):** 3α,11α-Dihydroxy-17α-, synthesis, *Marshall and Gallagher*, 1265
Hyaluronidase, effect, *Wattenberg and Glick*, 1213
3β-Hydroxy-17-keto-, hydrochloric acid hydrolysis effect, *Bitman and Cohen*, 455
**Streptamine:** Degradation products, *Carter, Loo, and Rothrock*, 1027
**Streptomycin:** Mannosido-, determination, chemical, *Perlman*, 1147
**Sugar(s):** Blood. *See* Blood sugar
Plant, labeled carbon distribution, *Gibbs*, 499
**Sulfhydryl group(s):** Blood serum protein coagulation, effect, *Huggins and Jensen*, 645
**Sulfur:** -Containing amino acids with ethionine, growth effect, *Stekol and Weiss*, 1049
Partition, urine, estrogen administration effect, *Starnes and Teague*, 43
Radioactive, cystine preparation, use, *Wood and Van Middlesworth*, 529

T

**Tetrahymena geleii:** Growth, *Rockland and Dunn*, 511
**Thienylalanine:** β-2-, phenylalanine-low diet, effect, *Ferger and du Vigneaud*, 61
**Thorax:** Aorta, respiration, *Briggs, Chernick, and Chaikoff*, 103
**Thyroid:** Action, deuterium in study, *Karp and Stetten*, 819
**Thyroxine:** Antagonists, *Frieden and Winzler*, 423
**Tissue(s):** Extracts, hyaluronidase, effect, *Wattenberg and Glick*, 1213
**Tocopherol:** α-, vitamin E potency, *Harris and Ludwig*, 1111
**Tooth:** Calcification, *Sobel, Hanok, Kirshner, and Fankuchen*, 205
Roentgen ray diffraction patterns, *Sobel, Hanok, Kirshner, and Fankuchen*, 205
**Tricarboxylic acid:** Cycle, intermediates, oxidation, liver mitochondria, *Kennedy and Lehninger*, 957
**Trypanosoma hippicum:** Carbohydrate metabolism, *Harvey*, 435
**Trypsin:** Amidase, kinetics, *Schwert and Eisenberg*, 665
Chymo-. *See* Chymotrypsin
Esterase activity, diisopropyl fluorophosphate effect, *Jansen, Nutting, Jang, and Balls*, 189
—, kinetics, *Schwert and Eisenberg*, 665
Inhibitor, Lima beans, isolation, *Tauber, Kershaw, and Wright*, 1155
Proteinase activity, diisopropyl fluorophosphate effect, *Jansen, Nutting, Jang, and Balls*, 189
**Trypsinogen:** Chymo-. *See* Chymotrypsinogen
Dinitrophenyl, peptides, isolation, enzyme digests, *Woolley*, 593
**Tryptophan:** DL-, resolution, papain use, *Hanson and Smith*, 815
Kynurenic acid conversion from, *in vivo*, *Heidelberger, Gullberg, Morgan, and Lepkovsky*, 143
Kynurenine conversion from, *in vivo*, *Heidelberger, Gullberg, Morgan, and Lepkovsky*, 143
Metabolism, *Heidelberger, Gullberg, Morgan, and Lepkovsky*, 143
*Heidelberger, Abraham, and Lepkovsky*, 151
Nicotinic acid conversion from, *in vivo*, *Heidelberger, Gullberg, Morgan, and Lepkovsky*, 143
*Heidelberger, Abraham, and Lepkovsky*, 151
**Tryptophan-β-$C^{14}$:** DL-, synthesis, *Heidelberger*, 139
**Tryptophan-3-$C^{14}$:** DL-, synthesis, *Heidelberger*, 139

**Tumor:** Adrenal cortex, dehydroisoandrosterone metabolism effect, *Mason, Kepler, and Schneider,* 615
*See also* Sarcoma
**Tyrosine:** Oxidation, liver, pteroylglutamic acid rôle, *Rodney, Swendseid, and Swanson,* 19

U

**Uranium:** Bone, adsorption *in vitro*, *Neuman, Neuman, Main, and Mulryan,* 325
—, deposition, *Neuman, Neuman, Main, and Mulryan,* 325, 335, 341
—, —, ion competition, *Neuman, Neuman, Main, and Mulryan,* 341
—, ion exchange, *Neuman, Neuman, Main, and Mulryan,* 335
**Urea:** Biosynthesis, *Ratner and Pappas,* 1183, 1199
**Urine:** α-Amylase determination, photometric, starch-iodine color, *Smith and Roe,* 53
Caffeine, determination, *Fisher, Algeri, and Walker,* 71
— excretion, *Fisher, Algeri, and Walker,* 71
Diphenhydramine excretion, *Glazko and Dill,* 403
Hydrogen ion concentration, determination, photometric, *Van Slyke, Weisiger, and Van Slyke,* 757
$N^1$-Methylnicotinamide, 6-pyridone, determination, fluorometric, *Rosen, Perlzweig, and Leder,* 157
Phenol and *p*-cresol determination, *Schmidt,* 211
Phenols, *Schmidt,* 211
Sulfur partition, estrogen administration effect, *Starnes and Teague,* 43

V

**Valeric acid:** α-Amino-β-hydroxyiso-, determination, *Stevens and Halpern,* 389
**Valine:** β-Hydroxy-, determination, *Stevens and Halpern,* 389
**Veratrine:** Alkaloids, *Sato and Jacobs,* 623
**Virus:** Influenza, hemagglutination, egg white inhibitor, *Lanni, Sharp, Eckert, Dillon, Beard, and Beard,* 1275
—, preparation and properties, *Lanni, Sharp, Eckert, Dillon, Beard, and Beard,* 1275
Reproduction, biochemistry, *Putnam, Kozloff, and Neil,* 303
**Vitamin(s):** $B_{12}$, *Lactobacillus bifidus* desoxyriboside requirement, relation, *Tomarelli, Norris, and György,* 485
E, muscle adenosinetriphosphatase and phosphatase, effect, *Carey and Dziewiatkowski,* 119
—, α-tocopherol, potency, *Harris and Ludwig,* 1111

W

**Water:** Body, measurement, antipyrine use, *Soberman, Brodie, Levy, Axelrod, Hollander, and Steele,* 31

X

**Xanthine:** Oxidase, liver, diet effect, *Schmitt and Petering,* 489
Oxidation, enzymatic, pteridines, effect, *Hofstee,* 633
**Xanthopterin:** Oxidation, enzymatic, pteridines, effect, *Hofstee,* 633

Y

**Yeast:** Folic acid conjugate extraction, *Greene,* 1075
